1 Learning reflection

I watched the videos '4.2 Ionic with Firebase Database-React' and '4.3 Demo Apps.' While watching the part in '4.2,' I had some confusion because the content of the 'Context API and Protected Routes For 4.2 's videos, although both completed the authentication and signup functionalities, had different Firebase configuration codes. After some research, I found out that the difference is due to the different versions of Firebase. My Firebase version is version 11, so I chose to follow the method taught by Dipesh for the configuration.

However, after setting up the project in Firebase and completing the Firebase code as well as the necessary page codes, the system showed me many problems. I realized that the videos use JavaScript syntax, but I am currently using the Ionic framework, which means there are adjustments and integrations needed, such as changing file names from .js to .jsx.

At first, there were many errors in the code, most of which were related to routing issues. After making some adjustments, the errors still persisted. Eventually, I decided to restart both the terminal and Visual Studio Code, and after the restart, the previously displayed path errors disappeared.

Later, error codes 2307 and 7031 appeared, which were related to not being able to find the module and the presence of unhandled type or definition errors. So, I first corrected the path issues, but after the correction, the error changed to 7016. After consulting with ChatGPT, I installed @types/react-router-dom. However, I still encountered the error "Could not find a declaration file for module './contexts/AuthContexts'". To resolve this, I created an AuthContexts.d.ts file in the src/contexts folder and defined the type with the following code: declare module './AuthContexts';. After defining this, the error was resolved.

When I copied the entire App.tsx file into ChatGPT and asked about the issue, I followed the suggestion to restart the development server (using npm run dev), but the problem persisted. So, I installed a Vite environment variable plugin and updated the firebase.jsx file by changing process.env to import.meta.env to ensure Vite could read the environment variables correctly. I also renamed the environment variable names in the .env.local file with a VITE_ prefix. When the issue persisted, I installed the vite-plugin-env-compatible plugin, but the problem was still not resolved. At this point, I began to wonder if switching to Vite was actually taking me further away from solving the problem. I researched what Vite is, and found that it is a front-end development tool designed to enhance the efficiency and performance of developing applications with frameworks like React and Vue. Since it is meant to optimize React, I copied all parts of the code into ChatGPT and asked if using Vite could be causing compatibility issues, leading to my inability to resolve the issue. ChatGPT then suggested using the dotenv plugin directly. I installed the plugin, updated the related code, and added a

vitest.config.ts file to support the test attribute settings. After these changes, the console issues disappeared.

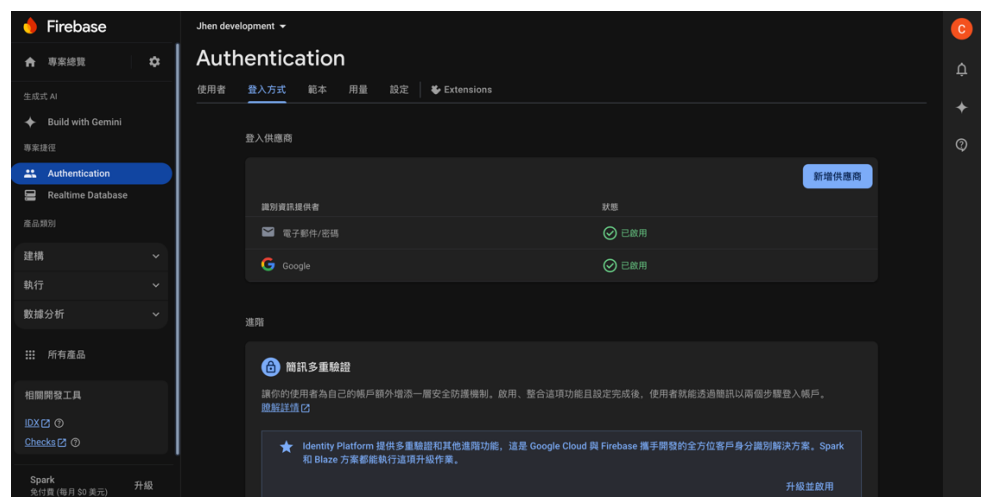

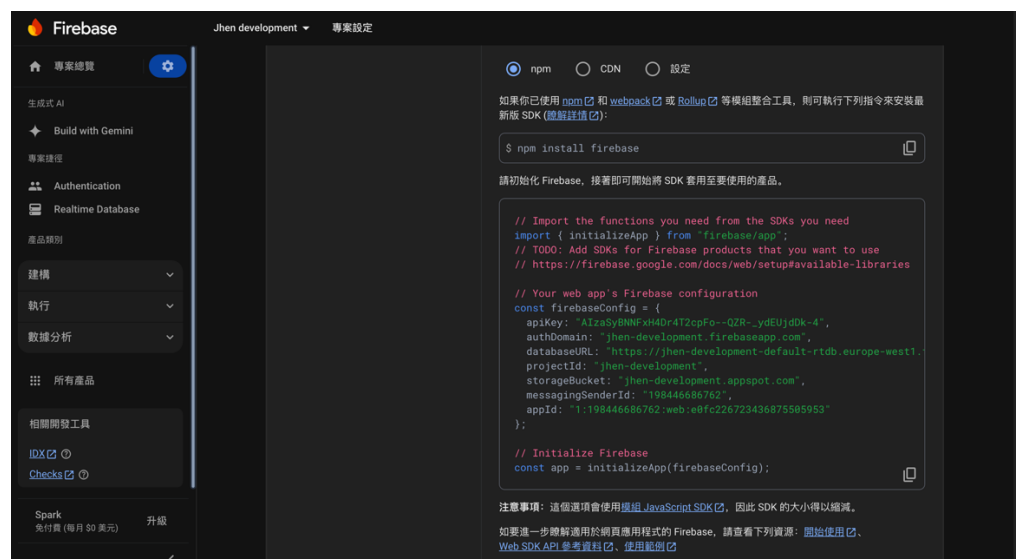

After finally resolving all the bugs in the code, the web page still did not respond. I realized that the web page address had changed, so I needed to restart the development server (using npm run dev) and navigate to the new URL: <http://localhost:5174/>. However, issues appeared in the console again, so the web page still could not be displayed.

Because I had already spent about 5 hours trying to identify and resolve the issues, but couldn't still make it work, and the report submission deadline has passed, I decided to stop for now and seek help from the teacher or friends next week. I really hope to resolve the issue; otherwise, I might consider setting up a simpler app for the time being.

2 Hands-on practice

Set up firebase and add authentication.

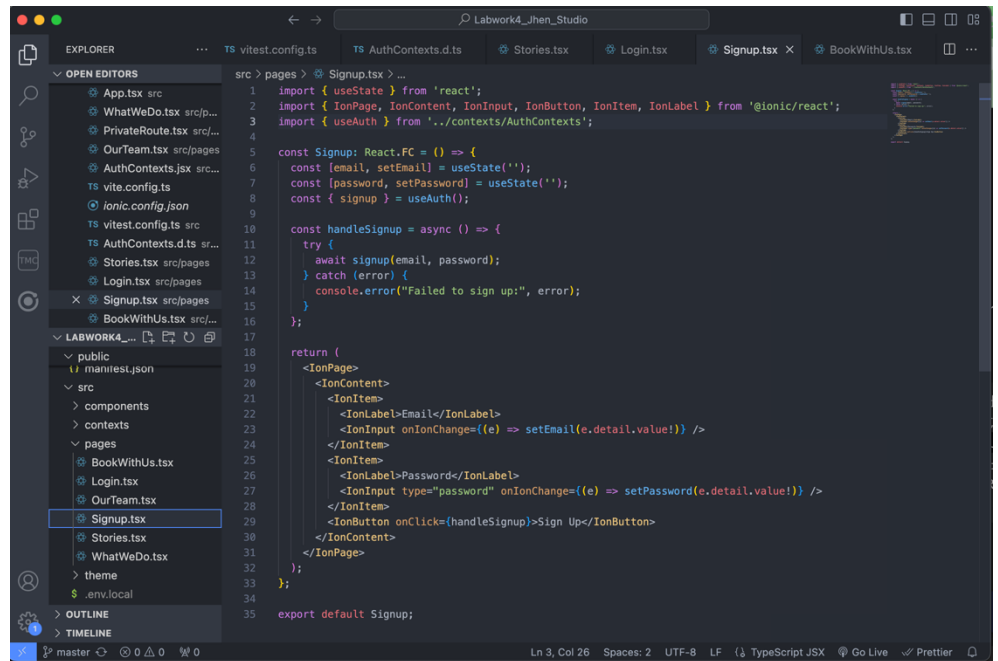

My app theme and structure: Jhen' s Studio

Login screen, registration screen's code.

```
1 import { useState } from 'react';
2 import { IonPage, IonContent, IonInput, IonButton, IonItem, IonLabel } from '@ionic/react';
3 import { useAuth } from '../contexts/AuthContexts';
4
5 const Login: React.FC = () => {
6   const [email, setEmail] = useState('');
7   const [password, setPassword] = useState('');
8   const { login } = useAuth();
9
10  const handleLogin = async () => {
11    try {
12      await login(email, password);
13    } catch (error) {
14      console.error("Failed to log in:", error);
15    }
16  };
17
18  return (
19    <IonPage>
20      <IonContent>
21        <IonItem>
22          <IonLabel>Email</IonLabel>
23          <IonInput onChange={e => setEmail(e.detail.value!)} />
24        </IonItem>
25        <IonItem>
26          <IonLabel>Password</IonLabel>
27          <IonInput type="password" onChange={e => setPassword(e.detail.value!)} />
28        </IonItem>
29        <IonButton onClick={handleLogin}>Login</IonButton>
30      </IonContent>
31    </IonPage>
32  );
33 };
34
35 export default Login;
```

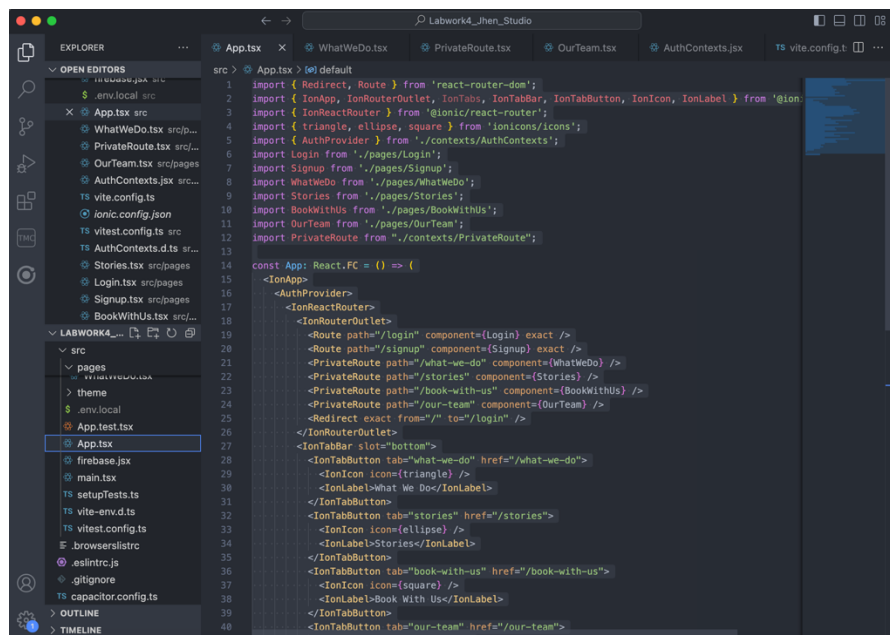

```

1  import { useState } from 'react';
2  import { IonPage, IonContent, IonInput, IonButton, IonItem, IonLabel } from '@ionic/react';
3  import { useAuth } from '../contexts/AuthContexts';
4
5  const Signup: React.FC = () => {
6    const [email, setEmail] = useState('');
7    const [password, setPassword] = useState('');
8    const { signup } = useAuth();
9
10   const handleSignup = async () => {
11     try {
12       await signup(email, password);
13     } catch (error) {
14       console.error("Failed to sign up:", error);
15     }
16   };
17
18   return (
19     <IonPage>
20       <IonContent>
21         <IonItem>
22           <IonLabel>Email</IonLabel>
23           <IonInput onChange={(e) => setEmail(e.detail.value!)} />
24         </IonItem>
25         <IonItem>
26           <IonLabel>Password</IonLabel>
27           <IonInput type="password" onChange={(e) => setPassword(e.detail.value!)} />
28         </IonItem>
29         <IonButton onClick={handleSignup}>Sign Up</IonButton>
30       </IonContent>
31     </IonPage>
32   );
33 };
34
35 export default Signup;
